(based on a hypothetical \$10,000 investment)

Fund name	Cost of a \$10,000 investment	Cost paid as a % of a \$10,000 investment
BondBloxx BBB Rated 10+ Year Corporate Bond ETF	\$15	0.19%

## How Did The Fund Perform Last Year?

For the period from inception (January 23, 2024) to October 31, 2024, the Fund generated a total return of 3.37%, generally in line with its benchmark, the Bloomberg US Corporate BBB 10+ Year Index, which returned 3.58%.

The Fund's performance largely reflected income from coupon payments ("income return") while prices fell slightly during the period. Prices of Treasury and Corporate securities with long-term maturities were negatively impacted during parts of the reporting period by perceptions that the Federal Reserve would need to keep policy rates higher than previously anticipated to combat inflation. Yield premiums were stable during the period, driven by resilient economic conditions, healthy corporate earnings, and strong market demand for fixed income assets.

The strongest performing industry sectors in the fund included banking, consumer goods, and utilities, while lagging sectors included retail, media, and transportation.

## Disclosures

---

Securities that are rated below investment-grade (sometimes referred to as “junk bonds”) may be deemed speculative, may involve greater levels of risk than higher-rated securities of similar maturity and may be more likely to default. The Fund’s income may decline if interest rates fall. Debt issuers and other counterparties may be unable or unwilling to make timely interest and/or principal payments when due or otherwise honor their obligations.

Privately issued securities are generally not traded on established markets. As a result of the absence of a public trading market, privately issued securities may be deemed to be illiquid investments, may be more difficult to value than publicly traded securities and may be subject to wide fluctuations in value. The Fund is classified as a “non-diversified” fund under the Investment Company Act of 1940 (the “1940 Act”). The Fund may be susceptible to an increased risk of loss to the extent that the Fund’s investments are concentrated in the securities and/or other assets of a particular issuer or issuers, sector, sub-sector, market segment, market, industry, group of industries, country, group of countries, region or asset class.

Exchange-traded fund (“ETF”) shares are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. NAV Returns are calculated using the daily 4:00pm NAV. Market price returns reflect the midpoint of the bid/ask spread as of the close of trading on the exchange where Fund shares are listed. Market price returns do not represent the returns you would receive if you traded shares at other times.
